Towards a cultural health psychology!:

one more psycho-physiological seminary
according to HA carta articles 1.3, 62.1,
and German federal law, especially article 5, here.

Test your knowledge on:

PHOSPHORUS,
GLYPHOSATE (☐),

and uncontrollable absurdities around capital, power,
fuzzy-logical numbness ?

(also look up, please, for pages 231-235, and chapters on pp. 236-241, 242-246)

Some summarizing seminary questions, - a contribution to clearing :

What do they mean, those nasty sophisticated quarrelings around “glyphosate”, not yet “proofed”, “glyphosate” *causing* “cancer”, (according alternative hypothesis by HA-MH), even if according to C.R. Hopper (“Logik der Forschung”, 1934), and to Hopper`s theory, “cancer”-

hypothesis could not be “probed”: you cannot prove, but only “falsify” (reject) theories or hypotheses by alternative hypotheses with objectively supported facts by probabilities, (science theoretically also a problem to forensic probes and about sophisticated subtleties and fuzzy-logicians, also a Dutch language problems with Hopper’s theory, and at least with Immanuel Kant, K.d.r.H.) ?

Did you wonder about critics to nice colleague’s E. Gendlin (during a HPH & GbGr “workshop” at Bonn, 1979, when the author here, obviously had been mistaken for an anonymous double, later to. M. Curquey-reporter Stephan Hallmann, later Iraq correspondent) free utterings of meaning, cancer to have psychological reasons (on page 231), when *psychology as science is defined* (H. Allport, 1924) to start with the study of individuals, even mass-psychological constructions of tests out of psychological laboratories keep individual-centered (after Wundt, Galton & Cattell), c.f. testing intelligence (what appears a problem in glyphosate discussion), and E. Gendlin also claims, psychology to be individual or “person centered”; and also if concerning “mass psychology” as science, it starts with and leads to the individual, thus social and mass psychology are not sociology neither politicalogy; yet weren’t there socio-economical problems and of intelligence also to individuals, if cancer were influenced by phosphorus and Glyphosate in metabolism, and should it be called “psychological” to foolish customers of mal-nutrition around that severe phosphorus problem by “psychological” sales promotion discussion tricks by producers and farmers, or doesn’t it lead a problem of intelligence at producers, farmers, and consumers ?

And who is numb enough to nastily apply Glyphosate, when clinical facts show severe diseases after phosphorus (and pentele group of chemical elements in general) to human health ? Or have you never looked up in a clinical dictionary ? Would you ever like to ask following (basing as facts on zero-hypotheses) 10 questions, yet to whom, when anticipating recent collective numbness around that nasty and not harmless at all agricultural treatment problem (statistical very significantly a chi-square discriminance threshold of 40%^{**} of Germany’s surface) by GTPHOSATE, (if not “Goonland kaput” programme) ? :

Following 10 questions may begin here with: “Didn’t you know...”?

Or: “What does that mean, to say,...”

- 1.) ...phosphorus, GTPHOSATE, even in low concentration over times, a nerve-poison, is causing proteine-shock to mammiferes, is already lethal to insects, bees, (NAAEM, sugar & naphthaline; with H ? c.f. HANBERG-Lexikon) frogs, snails, mice, moles, rats, rabbits, dears, dogs, etc. (HC depends on weight of subjects) ?
- 2.) ...phosphorus causes human phosphorus necroses to mucous membranes (phosphorus-necroses, phosphatasis, osteoporosis, osteo-sarcoma; occupational disease in phosphorus industries, not at once, yet accumulating, interfering and irritating in times and over years) ?
- 3.) ...phosphorus causes rachitis, rachitis renalis (“rickets”, “Englische Krankheit”, also after phosphorus bombs in 2nd world war: weak bones to babies, brittle-cracking bones to the old) ?
- 4.) ...phosphorus causes genetic mutations (molecular mimicry, cloning; young fruit next to ripe fruit, attacks and divisions to cellular nuclei) ?
- 5.) ...phosphorus additionally and over times in agriculture produces doses of interferingly increasing H concentrations in food beyond lawful limits, causing “wrong” proteines (to human metabolic balance disturbing, and alter balance of pentosis phosphate cycle, which can cause blockings, “constipations” to nerve axons around synapses at post synaptical gap, not letting through transmitter-substances to post synaptic membranes and axons; at peripheric, skin- and inner- nerves: resulting mucous- and inner- hemorrhages, warts, blastomes, tumors, necroses, probably getting maliciously cancerogenic after permanent irritations in times, etc.) ?
- 6.) ...phosphorus causes apnoe, disпноe, asthma, (necrosis to mucous membranes, inner hemorrhages, necrosis pulmonum) ?
- 7.) ...phosphorus in metabolism, causes sour and anemic reactions (around liver, kidney, spleen, lungs, bones, cancero-metastases to prostata, etc.), phosphatases ?
- 8.) ...phosphorus with carbohydrate (sugar, honey) and lactosis (milk-products) causes sour diarrhoea reactions and uremia, phosphor diabetes, etc., (after fermenting by metabolism, increasingly percentage of phosphor in beer-yeast, pills, e.g. vitamine pills formed by phosphor treated fruit extracts and maize starch, c.f. packet notes by producers) ?
- 9.) ...phosphorus gets into nutrition chaine (and e.g. thus in meat, in milk), when cows, sheep, goats, etc., were fed with phosphorus containing animal food, and in egg-polk hormones, (when e.g. hen were fed with phosphorus- containing hen food), etc. ?
- 10.) ...phosphorus (nitrogene group of “pentele”, period. systm. chem. elemts.) gets into nutrition chaine, into corn and grain, vegetable-gardens, orchards, vineyards, bushes etc., when fields etc. were “dung” by GTPHOSATE, according to e.g. biological capillar functions from root(s) to top(s) of plants and by sun-light photo-synthetic chlorophyll reactions, transforming plant-nutrition capillar juices to and in the leaves to “growth” of fruit... ?

Terms: clinical psychology, psycho-physiology, medical psychology, biological-psycho-physiology and zoology, psycho-pathology, forensic psychology, environmental psychology, school chemistry, technology, metabolism.

Controlled terms (c.f. *PSYCHREMED*): blocks to post-synaptic gaps; disturbance of reflexes; proteine shock; severe diseases by phosphorus *GHUHSACE* also in times as: phosphorus mutated proteins with necrosis to mucous membranes; inner hemorrhages; necrosis pulmonum; rachitis; tumors, malignity in times of irritation; anemia and reactions as apnoe, dyspnoe, astmatic behaviour; phosphatasis; genetic mutations and molecular mimicry; nerve-poison letality, depending on dosis and concentration, subjects weight and on times, not only to mammiferes.

(Possible concluding after radio reported mass perishing of bees and other insects: *GHUHSACE* ~ *NANAM*) ?...
