

Phobic and derealizational actions and the climate problem

Psychological zero hypothesis: there is no ozone gap at all in outer atmosphere of globe. And cognitions of people who proclaim that in Germany and that still perpetuatingly, rather seem deficient, disturbed and derealizing, if not joking.

Times ago scientists already had discussed increase of temperature of space also related to Vega approach hypothesis of milky-way, already.

That re-united German ozone phantasm, combined with a carbonic-acid or carbonated fizzy phantasm in sparkling waters, also psychologically leads to severe derealizations, neglecting "Ozon-Loch" to be any gap, or geological depression.

But there is not any lack of ozone in outer atmosphere, (behalve that phantasm for "lack" in German sailor's common sense of "Leck", "Loch", "gap" etc.).

Yet there is "ozone Loch" like in valleys, industrial areas etc., well known to at least Western German t.v.-alarms on ozone during the 1970ies...80ies. The ozone phantasm seems to follow those nazi definitions from German tyrants' times and geographical atlases and even lexica from times of cold war in Western-Germany.

Taken L. Wittgenstein hypothesis "*Der Sinn ist Unsinn*" (the sense is nonsense) as a kind of Popper (*general*) *naught-hypothesis*, there can occur further hypotheses:

Psychologically deficient or derealizing or disturbed people claim as "zero-hypothesis": there is no sun-ray modulation in helium in outer atmosphere of earth, because there to be ozone, and sir Raman's theory on frequency-modulation (Nobel price, 1912) of rays only occurs in molecular grids or structures.

If one took seriously that ozone-gap nonsense concerning outer atmosphere, proclaimed even by German democratic authorities and environmentally concerned ecological college programmes, (ecological engineering in internet), what arguments could one find to falsify that to a normal thinking scientist obvious nonsense or take it a joke?

A rational alternative-hypothesis (1) against the ozone-gap nonsense: there is an increase of helium (He) in outer atmosphere of globe since beginnings of earth-gas exploitation (at about 8% existing in earth-gas-caverns normally). Helium as precious gas attaches no molecular structures, thus cannot burn, when other earth gases burn.

And: Temperature increases on earth by sun-ray frequency modulation in helium. (Effecting burning-glass alike burn points on maple leaves for exmpl. etc. mistaken in northern Germany as wood damages by lice or bacteria etc., when alike maple leaves in the early year only on the upper side of leaves those "black points" occur and every empirically experienced logic had taught us, lice e.g. would rather "settle" underneath those leaves, excepting flying lice in the late year).

And helium in outer earth atmosphere in relation to the increase (augmentation) having left prospecting caverns in earth shelves, reaches, outer atmosphere, Archimedes tells us pressure of earth shelves on magma to be heavier, when leaving oil, gaz and He with consequence of less buoyancy of most northern hemisphere earth shelves.

1.1. outer atmospherical helium (He) increase densifies and could lead to frequency modulation of sun rays with warming up effects on earth. Helium increase and Rutherford-ionization of He (a.o. after reactor explosions) combine, ($\alpha < 0,001$).

1.2. Ionization of He by betatron (college experiment on velocity of light, Abendgymnasium Kempen, at British-Rhine, April, 1972) seem to produce vagabounding electrons which match to no other molecular structures, ($\alpha < 0,001$), with uncontrolled multiple reactions, ball-chain rather than circular-chain reactions., which bundle modulating normal sun rays upto hard rays.

When getting knowledge on psychological field-theory by Kurt Lewin and with look at his "topology" of personality, there could come at the first glance or later the idea of baroc Paris Cassini curves, also, if topologies of Giovanni Domenico Cassini (discoverer of Saturn rings) were applied to metereologic events, spherically-trigonometrically, (probably asides the Abel integra). What could that mean, here and now in our times ? (Impossible cubification of globe).

After Felix Baumgartner spectacularly "fell on earth" *) by space-capsule on parachute, New Mexico, USA, autumn 2012, he had had reached a "highth" of about 36 km distant from earth, were helium logically surrounds earth. His balloon had been filled according to worldwide news with helium. Asides a rather knickerbocker question, who would take away that balloon waste left behind in outer atmosphere, one could remark objectively: around rather cold and already partly frosty Northern Europe had been summerheat about a week after that parachute manoeuvre.

If one took for one focus of inner Cassini curves the region about New Mexico and Texas, where earth-gas since tenths (decennia) of years is steadily burning according to worldwide news, and about 8% of helium drifting into outer atmosphere, helium logically not burning in classical sense by molecular changes, excepting Rutherford ionization, and this unexpected northern European warmth regionally for the other inner focus of Cassini curves, the climate problem were to be seen in those to outer atmosphere drifting helium, worldwide: Both of Cassini's inner circles surrounded by a (medieval) Giordano Bruno infinite sign alike curve, if were considered spherically vectorially, seem to describe the weather variety of sudden high metereological pression in northern Europe and after depression around northern USA and Caribic states, distributing in time supposingly to those outer Cassini (ellipsoide) curves (fig.), c.f. also "loxodromic transformation" in mathematics and turbulences after water-falls experiences in canoeing:

Ergo: HELIUM CONTROL !!!

Footnote: *) psychologically reminding a cine-film by David Bowie: "The man who fell on earth", (~ 1976/77).
